

Google Drive File Picker

The Google Drive file picker allow you to add files from your Google Drive into an assignment or portfolio post.

There are a number of limitations and bugs present in Google's file picker which we have outlined below.

Internet Explorer

Users of Internet Explorer can see native Google Docs (Google bug). Google's file picker does not work correctly for all files, you will only see compatible file types. To see all files stored on your Google Drive you can use Chrome or Firefox.

Google Spreadsheets

Native Google spreadsheets cannot be converted to Excel spreadsheets using the file picker (Google bug). Spreadsheets originally created using Microsoft Excel or Open Office will work.
