

# Apps

Apps are a powerful, easy way to add functionality to your site. An app is a small, easy-to-use, stand-alone application that solves a specific need, or delivers specific information or functionality to a page.

For those of you familiar with SharePoint, Apps are the same as Web Parts on a page or Lists & Libraries on your site.

While SharePoint offers a large variety of apps, many of them have already been incorporated into your site, or are better included using Scholantis features.

Should you decide you would like to include an app on your site, it is a two step process.

1. Install the app on your site.
2. Add, or place, the app on the page.

In some cases, the app will already be installed on the site (as is the case with many Scholantis apps) and all you'll need to do is add it.

For a complete list of apps, see [Recommended Apps](#).
